

Working with Markdown

There are two major parts to your RMD document.

The first part is called YAML (YAML Ain't Markup Language) and is between the two sets of three hyphens. This constitutes meta-data for your document.

The second part is the main text and markdown formatting for your document.

```
1 ---
2 title: "Untitled"
3 author: "Andrew Zieffler"
4 date: "1/5/2018"
5 output: html_document
6 ---
7
8 ```{r setup, include=FALSE}
9 knitr::opts_chunk$set(echo = TRUE)
10 ```
11
12 ## R Markdown
13
14 This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF,
15 and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.
16
17 When you click the Knit button a document will be generated that includes both content as
18 well as the output of any embedded R code chunks within the document. You can embed an R code
19 chunk like this:
20
21 ```{r cars}
22 summary(cars)
23 ```
24
25 ## Including Plots
26
27 You can also embed plots, for example:
28
29 ```{r pressure, echo=FALSE}
30 plot(pressure)
31 ```
```
